

Connecting People, Solving Problems

Field Support

JDI Contracts Inc. interacts with everyone on the project — Owners, stakeholders, contractors, and subcontractors — in a centralized command and coordination role. We keep you informed and aware at every step of your project, helping all project stakeholders to deliver their best.

Our Field Support Center of Excellence

Our field support services include:

- Site management
- Leadership, facilitation, and issues resolution
- Labor management
- Field engineering support, including field change notices (FCNs) and budget monitoring and control
- Field document control set management, including on-site reproduction services
- Contract support services, including budget monitoring and audit
- Materials handling and management
- Safety, environmental, and hygiene management
- Lock out/tag out process management
- Site security and access oversight and support
- Office and administrative support and communication services

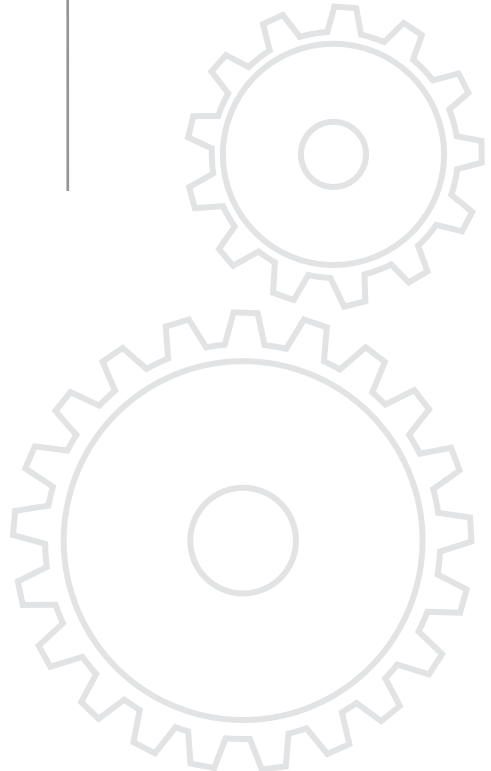

Our Field Support in Action

We maintain an on-site presence at your work site and understand the value of relationships, consistent presence, robust planning, and the requirements to get the job done the way you want.

We are in the field so you don't have to be.

JDI is your eyes, ears, and hands in the field. We keep your construction site safe, compliant, and in a position to deliver the results you expect from all project stakeholders.

Business Services

Critical to the success, and the bottom line, of every project is how well the project meets its financial and business objectives.

JDI Contracts Inc. helps you manage your critical information, including all of your project management, accounting, budgeting, and finance data.

Unique to JDI is our ability to seamlessly integrate your project information with your existing business systems using our strong information technology capabilities.

Our Business Services Center of Excellence

Our end-to-end project services address all the business needs and data requirements related to the successful delivery of your project.

Our integrated business, financial management, and information technology services include:

- Accounting and auditing
- Financial analysis and systems application
- Real-time budget tracking and forecasting
- Scope, schedule, and budget creation, management, and integration
- Earned value tracking and efficiency monitoring
- Work flow development and documentation
- Procedural analysis and development
- Change management
- Stakeholder computer network systems integration
- Information technology leadership and project infrastructure
- Hardware, software, and network security

Our Business Services in Action

Our staff has extensive experience managing the financial aspects of projects and acquisitions of any size. We use the most up-to-date tools and processes available so you'll always know how your project is progressing.

JDI helps you effectively manage your project's dollars and understand at any point exactly where your project stands — and where it's going — including time and budget.

Business Services: Managing Your Critical Project and Process Information

Technical Services

JDI Contracts Inc. provides integrated leadership and technical services for your project. We work with multiple design resources to complete project designs and specifications.

Our Technical Services Center of Excellence

Our approach integrates your technical team with other project phases, keeps an eye on the big picture, and provides a well-defined road map to the results you want.

Our technical services include:

- Engineering leadership, facilitation, and process support
- Work flow development, role definition, and task assignment and tracking
- Construction phase integration, including planning, sequencing, and scheduling
- Project data management through JDI's own program management system
- Ad-hoc engineering, design, and drafting services
- Contract development, review, and management
- Internal/external gap and risk analysis

Our Technical Services in Action

Our team shares their extensive knowledge of various industries and continuous processes, helping your team more easily navigate the project design process. Our

experiences enable us to offer effective solutions to your complex engineering and technology problems and deliver your project's specific objectives.

We work diligently with all involved, through all project phases, to identify, mitigate, and avoid risks throughout the project cycle.

JDI integrates all engineering and design resources, supplies gap technical expertise when needed, and helps deliver efficiently executed designs and projects that are easier to build.

Technical Services: Filling Project Gaps and Integrating the Technical Team

Leadership

JDI Contracts Inc. listens and understands.

We recognize the needs of owners and their organizations, and help make the right decisions at every step of your project.

The JDI road map helps owners guide and strengthen their teams through the entire project life cycle, from strategic planning through implementation, until your project is in service.

Our leadership team has deep and varied experience with construction projects of all sizes. We provide extensive, integrated program, project, engineering, construction, and site management services at all levels of a project, eliminating the need for our clients to permanently add staff.

JDI employees assimilate seamlessly with our clients' teams, serving as owner's representatives, strategic partners, or as expert industry gap resources.

We blend all of your stakeholders, helping ensure everyone delivers their best.

Our Leadership Center of Excellence

We offer owner and project stakeholder representation services designed to support the completion of any project undertaken by lean, continuously operating organizations.

JDI provides leadership and integrated project management at every level of the organization, at each step of the process, for all stakeholders.

Our Leadership in Action

We help our clients and partners implement solutions that achieve their desired objectives by:

- Defining all roles and responsibilities at the beginning of a project, so involvement, expectations, and deliverables are clear
- Ensuring business and technical objectives are clearly defined, achievable, and well integrated
- Supplying highly skilled and experienced personnel to work independently or embedded in a client team
- Supplying integrated program management services, including project scope, schedule, and budget development, management, and integration

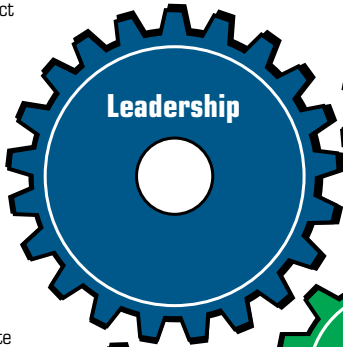

Leadership: A Road Map through a Complex and Costly Process

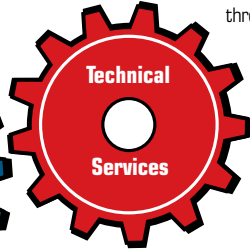

Centers of Excellence

Our Centers of Excellence Drive Your Business Results

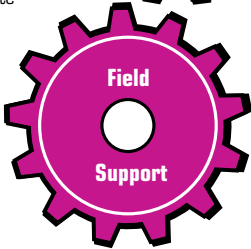

Leading your project through program and project management, stakeholder team development and integration; and scope, schedule, and budget management

Delivering your project design through a well-developed engineering process, appropriate gap resources, and strong IT and data integration across all project stakeholders

Ensuring strong site management, contractor support, materials management, and safety and environmental compliance

Tracking all critical project information including accounting, budgeting, finance, and project documentation, with transparency and audit compliance through all project phases

JDI Contracts Inc.'s Centers of Excellence — specific areas of focus that drive your business performance and results — provide a wide variety of expert services on large and small projects.

We've organized our Centers of Excellence into groups of similar, best-in-class services, allowing us to be collaborative, flexible, and highly responsive to client and project stakeholder needs.

Our successful approach includes:

- Utilizing best-in-class program management and implementation methods
- Guiding and strengthening owner teams through the entire project life cycle, including development, design, construction, checkout & startup, and operations phases
- Backing our owner representation services with extensive real world experiences in management, engineering and design, accounting and finance, information technology, and construction and maintenance craft work
- Maintaining long-term relationships with contractors and suppliers
- Collaborating with all project stakeholders to develop a complete project road map, then navigating to an in-service notification on time, under budget, and within specifications

JDI's Centers of Excellence in Action

The JDI Checkout & Startup team gets your project into operation.

During the Checkout & Startup phase, the project budget and schedule are nearly expended. Multiple contractor and owner teams are at peak manpower, doing many different things in the same space and time. Bottlenecks emerge, extending construction and interest payments, delaying production, and preventing revenue generation.

Our leadership team works to mitigate risks using our expertise in 24/7 checkout efforts. We tightly integrate and facilitate discipline-specific construction completion, equipment checkout, and function and sequence testing, all within the constraints of your schedule.

In the Checkout & Startup phase, we'll help you get your project into service, where we:

- Complete and implement an integrated checkout and startup plan
- Complete operations training in preparation for checkout and startup
- Perform all quality control inspections to ensure contractor compliance with design specifications
- Facilitate contractor punch list management
- Complete checkout on all mechanical, electrical, and control systems to ensure functional compliance
- Complete audit documentation of equipment function testing results
- Turn over site control to Operations with completed checkout and startup certifications
- Support full sequence and safety testing according to pre-defined operational requirements

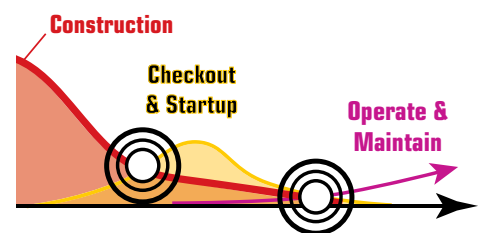

- Support on-going transition to continuous operations through compliance, performance, and reliability testing
- Complete final turnover punch lists and update all project construction documents to a final record set

We're there until the very end, ensuring all steps in the process are successfully completed, to get you into operation as smoothly and safely as possible.

JDI manages the crucial transitions of your startup efforts with good communication, clear goals and objectives, solid planning and coordination, and removal of roadblocks before they happen.

JDI Contracts Inc. turns your complex plans and drawings into brick, mortar, and steel.

With JDI at the helm, each step in your project is tightly integrated to optimize the project schedule and reduce field costs. Our road map uses industry experience, detailed planning, and a team approach to deliver your project as designed and specified.

During the Construction phase, we'll lead your integrated field stakeholder team, set up sequential and parallel construction activities, and get your project done. In this phase, we:

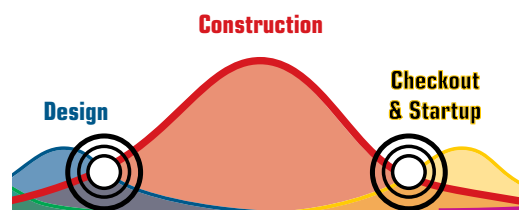

- Manage construction and related field activities with a complete implementation plan and integrated technical package
- Assemble all technical drawings, specifications, and other information required for bid packages
- Establish clear procedures for those areas impacted by construction, including safety, environmental, hygiene, and site access
- Establish protocols for communication between operating and construction entities
- Establish reporting relationships and performance milestones for the Construction phase
- Integrate scheduling for all stakeholders
- Implement the materials and site management plan
- Support bid development, contractor selection, and work release

Safety and Environmental Compliance are Critical

Our goal is a zero incident safety and environmental record, and our commitment starts long before field activities begin. As part of our full-service approach to project management, we offer safety training, advisement, and audit services for all field activities.

JDI leads an integrated stakeholder team through all of your construction-related activities. We'll keep you and your team informed, safe, and working together, so you know what's happening on your project every step of the way.

Design: Establishing your Project Specifications

The Design phase establishes your comprehensive project specifications; every detail is calculated, drawn, and planned.

We'll support your integrated design effort, where together we:

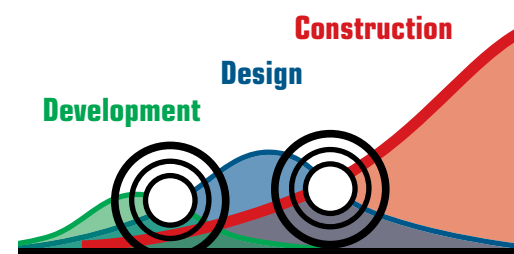

- Form, lead, and facilitate a team composed of resources from multiple firms, using an integrated design process
- Add and integrate gap resources as required to maintain project schedules
- Specify all project deliverables, and provide and maintain oversight to ensure design compliance
- Establish detailed schedules, budgets, and designs
- Define and delineate the project's scope, including a list of major equipment
- Initiate Construction phase planning and define inputs
- Develop and initiate a procurement management plan
- Identify appropriate review cycles and performance milestones
- Integrate and support permitting and engineering completion
- Provide and load project budget and information tracking systems
- Establish project cash flow management plans
- Maintain a comprehensive project schedule for all stakeholders

In the Design phase, your project becomes tangible, with specifications, drawings, costs, and sometimes trade-offs.

Constructability reviews help increase your project's engineering value and identify potential problem areas. Throughout the process, JDI helps you sort out the real issues, solve problems, and implement practical solutions that work.

JDI leads the integration of your design team, so that together we design and engineer all aspects of your project, down to the last technical detail.

Development: Planning, Evaluating, and Approving Your Project

JDI Contracts Inc. collaborates with your entire stakeholder team to formulate a complete project plan.

We support your project, regardless of size or industry, right from the word “GO.” Our continued oversight and involvement — in the Development phase and throughout the project — give you confidence that we’ll reach the intended outcomes.

We’ll keep your entire project in focus as we help build the project team and facilitate the Development process, where together we:

- Facilitate building the project leadership team
- Establish project economics, outcomes, and key project decision criteria and approaches
- Review, clarify, and modify project scope
- Develop corporate project outcomes
- Establish detailed phasing plans with anticipated outcomes, including signposts, milestones, and indicators
- Analyze and evaluate project risks
- Develop appropriate reporting relationships with defined roles, responsibilities, and interface requirements
- Build comprehensive sequenced project schedules

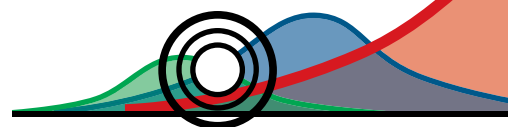

As your Owner’s Representative, we represent your interests while laying the groundwork for how your project will be implemented. We help establish the connections between your vision as an owner and the overall plan required to deliver your project’s outcomes.

JDI helps you set clear, achievable business and technical objectives and outcomes at the very beginning. This way, everyone has the same understanding of their involvement, expectations, and deliverables throughout the project.

Design
Development

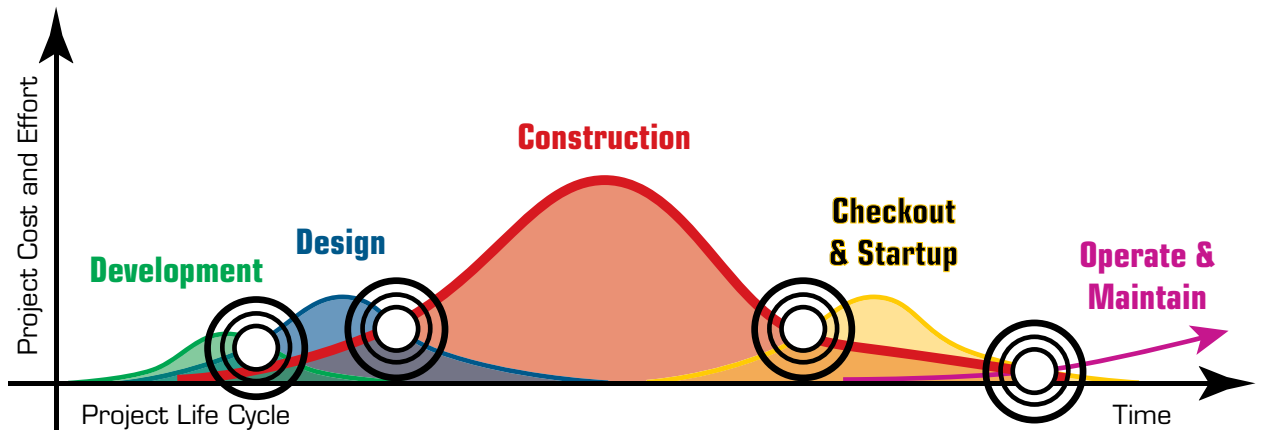

JDI's Proven Experience Adds Value

JDI Contracts Inc. works with you to develop a project road map through all phases. We connect each phase, and help all teams navigate through every task to ensure your path is optimized — every step of the way.

Our teams guide and support your project with expertise from our Centers of Excellence. We get your project done with demonstrated leadership and through transparent integration of all required services — wherever, whenever, and however needed.

The skills and experience of our leadership team, coupled with our process road map, help each team member understand his or her contribution and how it fits in with the overall project. Everyone is aware of their downstream impact, and knows how to be successful, from the beginning of the project until the conclusion of a successful reliability run.

By paying particular attention to the phase-to-phase transitions, JDI leadership helps create smooth

handoffs between teams, so that everyone has a clear understanding of what is required to achieve the desired results.

We understand all aspects of project implementation. Our ability to listen, communicate, and cooperate allows us to be flexible and responsive to your needs.

Our skills, experience, and expertise gets your project done.
